Beginning of Visit

History obtained from spouse.

Reason For Visit

Jack is being seen for a clinic follow-up of atrial fibrillation, coronary artery disease, heart transplant, hyperlipidemia and hypertension.
I saw this 70-year-old man in followup consultation on

Unfortunately his increasing dementia. His atrial fibrillation on Coumadin. He has a history of coronary artery disease with stenting. He has hypertension hyperlipidemia. He is short of breath because his atrial fibrillation rate is too rapid and he needs more diuretics.

History of Present Illness

The patient states he has been generally stable since the last visit.

Interval Events: Hospitalized in CHF last Dec.

Symptoms: The patient has had no significant interval symptoms. Dyspnea worsened.

Associated symptoms: no syncope, no PND, no tendency for easy bleeding, no tendency for easy bruising, no TIA symptoms and no recent weight gain.

His symptoms do not limit his activities.

Symptoms:

Review of Systems

Constitutional, Eyes, ENT, Cardiovascular, Respiratory, Gastrointestinal, Genitourinary, Musculoskeletal, Integumentary, Neurological, Psychiatric, Endocrine and Heme/Lymph are otherwise negative.

Vitals

Vital Signs [Data Includes: Current Encounter]

Systolic	156
Diastolic	95
BMI Calculated	30.31

BSA	
Calculated	2.05
Height	5 ft 8 in
Weight	200 lb
Heart Rate	107
O2 Saturation	98

Physical Exam

Constitutional: well developed, normal appearance, well groomed, well nourished, no deformities and no acute distress.
Eyes: the conjunctiva exhibited no abnormalities and the eyelids demonstrated no xanthelasmas.
HEENT: normal oral mucosa, no oral pallor and no oral cyanosis.
Neck: normal jugular venous A waves present, normal jugular venous V waves present and no jugular venous cannon A waves.
Pulmonary: no respiratory distress, normal respiratory rhythm and effort, no accessory muscle use and lungs were clear to auscultation bilaterally.
Cardiovascular: heart rate and rhythm were normal, normal S1 and S2 and no murmurs present.
Abdomen: soft, non-tender, no hepato-splenomegaly and no abdominal mass palpated.
Musculoskeletal: normal gait. The gait was sufficient for exercise testing.
Extremities: no clubbing of the fingernails, no localized cyanosis, no petechial hemorrhages and no ischemic changes.
Skin: normal skin color and pigmentation, no rash, no venous stasis, no skin lesions, no skin ulcer and no xanthoma was observed.
Psychiatric: oriented to person, place, and time, the affect was normal, the mood was normal and not feeling anxious.

Assessment

Atrial Fibrillation 427.31
History of Cath Stent Placement
Congestive Heart Failure 428.0
Congestive Heart Failure With Systolic And Diastolic Dysfunction 428.40
Coronary Artery Disease 414.00
Dementia 294.8

Hypertension 401.9

Plan

Atrial Fibrillation (427.31)
Electrocardiogram (EKG/ECG) Done:

Discussion/Summary

Atrial Fibrillation Discussion/Summary: The impression is atrial fibrillation. Currently, this condition is decompensated. Medication Changes: as documented in orders.
Coronary Artery Disease Discussion/Summary:
Impression: coronary artery disease. Currently, this condition is stable. Medication Changes: none.
Hypertension Discussion/Summary: The impression is hypertension. Currently, the condition is deteriorating. Medication Changes: as documented in orders.
The treatment plan was discussed with the patient.
Patient is instructed to follow up in 4 month(s).
I told the wife to increase the Lasix to 80 mg one day per week, and to give the digoxin 0.125 on a daily basis. He will see me in 4 months when he returns from Florida.
